# Websites for Ozone Generator Purchases

Using back of the envelope calculations you want to have 10,000 mg / hour rated production of ozone for every 500 ft.<sup>2</sup>

For example, if you had an office that is 5000 ft.<sup>2</sup> you want to have machines that total 100,000 mg per hour rated Ozone production

Instead of buying one single machine capable of 100,000 mg per hour production for a space of 5000 ft.<sup>2</sup> , it is usually better to buy several smaller machines that add up to at least 100,000, or more, so that you can spread the machines around a larger building and get better ozone coverage than using a single 100,000 mg per hour production ozone generator

The following are links to several ozone generating websites that sell these type of machines for your consideration. There are a lot more sites to search if you want to expand your research.
